1 YIT environmental principles

YIT's environmental principles are based on the company's Sustainability Policy. In accordance with the policy, we create better living environments and reduce the environmental impact of our own operations. With our products and services, we have the possibility to also support the reduction of our customers' environmental impact. We aim to use this possibility to its full potential and thus support the creation of an increasingly sustainable living environment. Furthermore, by developing sustainable solutions and investing in sustainable initiatives, we have the opportunity to create new business and new business models.

Additionally, the following principles apply to our approach towards the environment:

We aim to reduce the energy consumption and waste generation of our own operations as well as our greenhouse gas emissions.

We pay special attention to energy and material efficiency of our products and services, as well as the choice of materials. We continuously develop new environmentally friendly solutions.

We strive to provide a long-lasting, sustainable living environment for our customers. We invest in developing new innovations in this area.
